Supplemental Figure S1. Flowchart of the cohort study

Supplemental Figure S2. Survival curves for (A) smoking trajectories for the entire study population, (B) smoking trajectories for the three-measurement subpopulation, (C) smoking status, and (D) baseline smoking levels

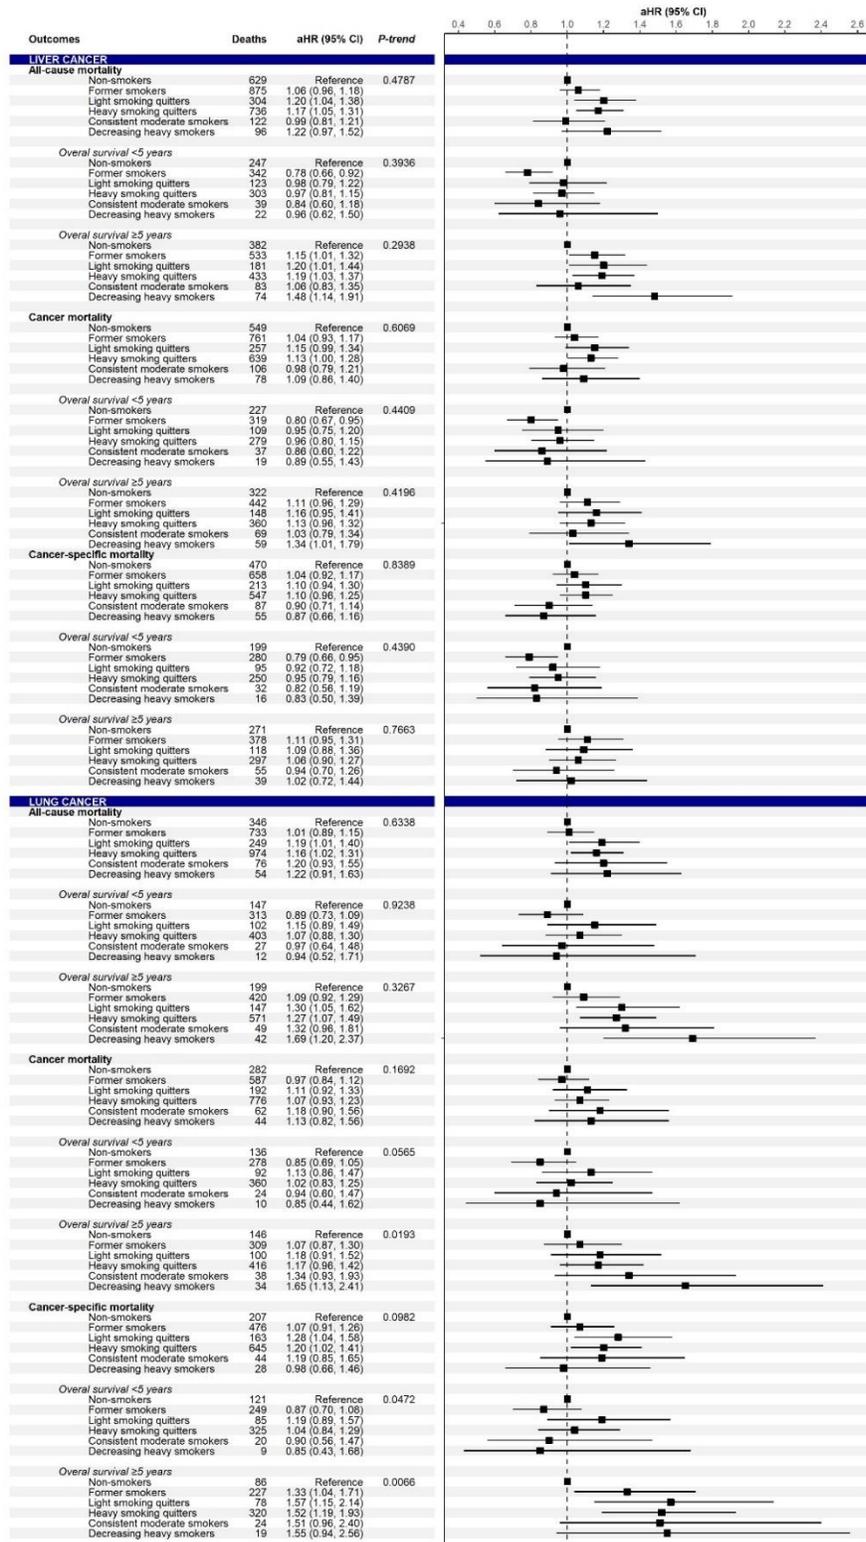

Supplemental Figure S3. Mortality risks according to smoking trajectories for pooled cancer groups: smoking-related cancers and cancers unrelated to smoking

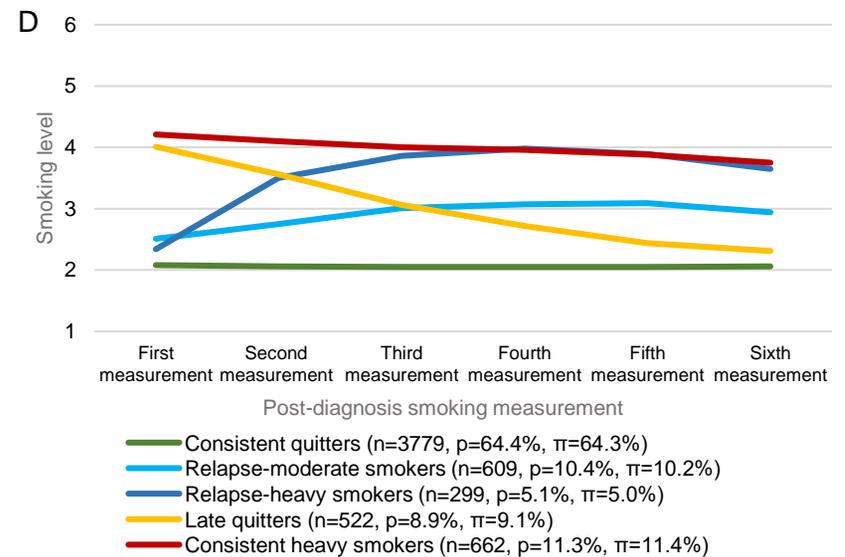

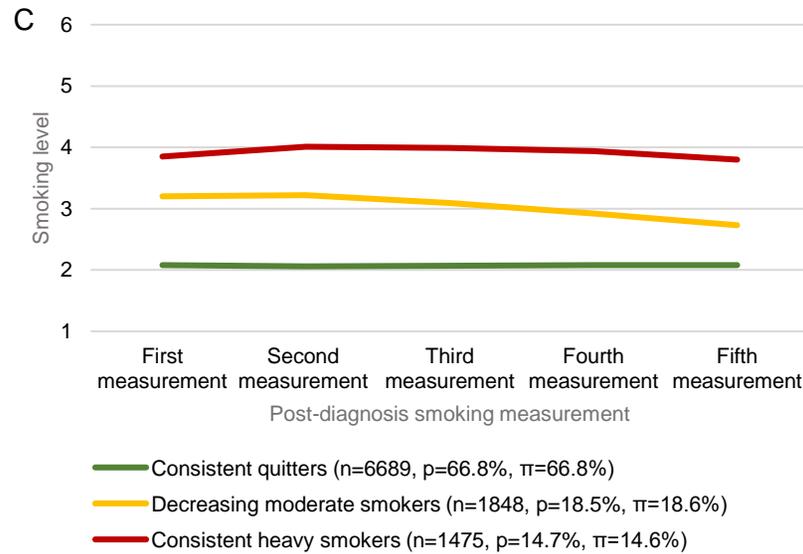

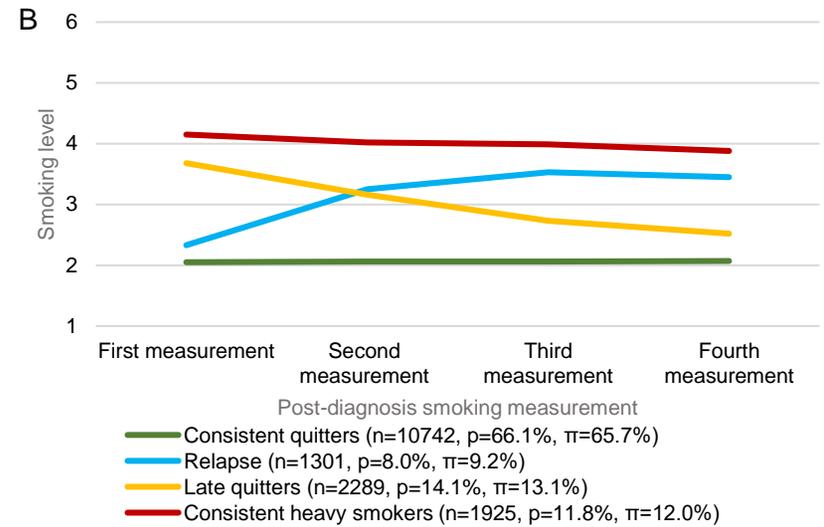

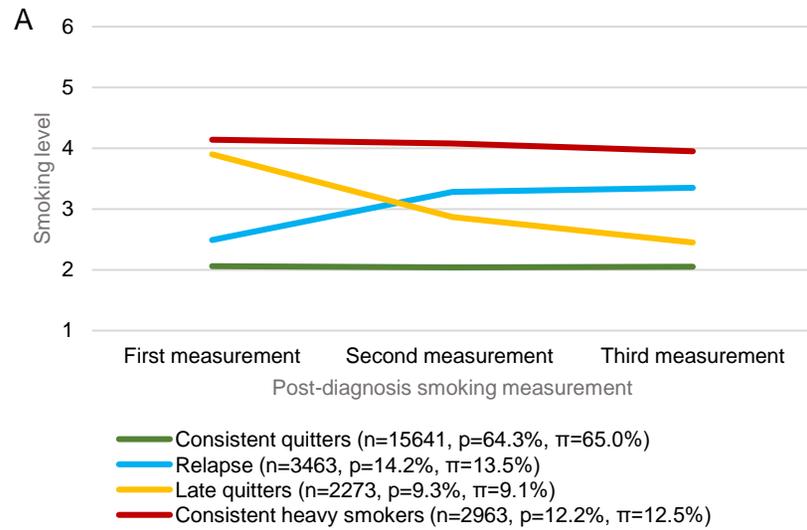

aHR: adjusted hazard ratio, adjusted for age at cancer diagnosis, income, body mass index, alcohol drinking, physical activity, and Charlson Comorbidity Index; CI: confidence interval.

Supplemental Figure S4. Mortality risks according to smoking trajectories for liver cancer (n=7068) and lung cancer (n=6707)

aHR: adjusted hazard ratio, adjusted for age at cancer diagnosis, income, body mass index, alcohol drinking, physical activity, and Charlson Comorbidity Index; CI: confidence interval.

Supplemental Figure S5. Smoking trajectories during post-diagnosis for the subgroups of (A) three post-diagnosis measurements (n=24340), (B) four post-diagnosis measurements (n=16257), (C) five post-diagnosis measurements (n=10012), and (D) six post-diagnosis measurements (n=5871)

π : estimated group membership of the smoking trajectory (%); n: number of participants; p: percentage of participants assigned to the smoking trajectory group (%).
