

## Supplementary file

### Supplementary Example 1: co-occurrence analysis odds ratio

		Ethyl 2-methylbutyrate	
		absent	present
Dimethyl sulfide	absent	25967	5199
	present	566	1447

In this example, there are 33,179 e-liquids. Ethyl 2-methylbutyrate and dimethyl sulfide occur together in 1,447 of these, which is 4.4% of all liquids. The odds for finding ethyl 2-methylbutyrate in an e-liquid that *does not* contain dimethyl sulfide is  $5,199/25,967 = 0.20$ . The odds for finding ethyl 2-methylbutyrate in an e-liquid that *does* contain dimethyl sulfide is  $1,447/566 = 2.56$ . Hence the odds ratio =  $2.56/0.20 = 12.8$ .

**Supplementary Figure 1. Ingredient network for disposable e-cigarettes.** Connections indicate significantly overrepresented ingredient combinations. Orange, cluster B; blue, other flavorings; pink, nicotine. Bold lines indicate combinations found for multiple product types.

**Supplementary Figure 2. Ingredient network for rechargeable e-cigarettes.** Connections indicate significantly overrepresented ingredient combinations. Green, cluster A; orange, cluster B; blue, other flavorings; pink, nicotine or related. Bold lines indicate combinations found for multiple product types.

**Supplementary Figure 3. E-liquid ingredient network clusters A (left) and B (right).** Connections indicate significantly overrepresented ingredient combinations. Bold lines indicate combinations found for multiple product types.
